CyberSuite Marketplace

2nd CyberSuite hackathon

October 2026 | Paris, France

Co-funded by
the European Union

Co-Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or Digital Europe Programme. Neither the European Union nor Digital Europe Programme can be held responsible for them.

- 01 CyberSuite Marketplace – What is it?
- 02 CyberSuite Marketplace Vision
- 03 Marketplace Exercise for 2nd Hackathon

CyberSuite Marketplace – What is it?

The **CyberSuite Marketplace** is a SecaaS Marketplace:

Fosters the **extensibility** of the CyberSuite Framework through compatible **cybersecurity capabilities** (e.g. policies, configurations) that be utilized by the CyberSuite Assets in order to address emerging/new threats.

For **Cybersecurity Service Providers**

E2E Service Lifecycle Management

For **Cybersecurity Service Consumers** (Mes, SMEs, etc.)

Service Exploration

Direct Usage in the CyberSuite Framework

Marketplace available: <https://marketplace.cybersuite.s5projects.eu>

Features

Innovative Services

Integration with CyberSuite Framework

Service Support

Competitive Pricing

Enhanced Visibility for ISVs

Community

Intuitive Categorisation

Service Recommendation

Advanced Service Exploration

Policies

Configuration Scripts

Example Services

Marketplace available: <https://marketplace.cybersuite.s5projects.eu>

Marketplace Scenario: *Explore and use the CyberSuite Marketplace as a Service Consumer (Customers)*

1. Enter the Marketplace: <https://marketplace.cybersuite.s5projects.eu>
2. Register (sign up) as Customer and fill in the requested information.
3. After your registration is approved by the Marketplace Admin you can sign in the Marketplace. Admins will approve registrations promptly during the hackathon session.
4. Explore the Marketplace: landing page and FAQ for the CyberSuite Customer, listed services, notifications. You can use the chat bubble to ask questions to the Marketplace Support or the Provider of a specific service.
5. Find a specific policy compatible with an asset (e.g. **PUZZLE**) to **allow images only from specific repositories**. Use the available filters or the text-based search to identify it.
6. Once you find the **Allowed Repositories** policy, check its profile, instructions, and add to favourites.
7. Download the **Allowed Repositories** policy. Use a text editor to open and view the template.
8. (OPTIONAL) Hop to the CyberSuite Framework to use the pre-configured policy together with PUZZLE. (Note: to speed-up the process the preconfigured policy is available in the CyberSuite Framework. Follow instructions of the platform for this action)
9. (OPTIONAL) After you see the capabilities of the used policy, you can go back to the Marketplace and leave a review/rating to the policy you used!

Do the exercise before the PUZZLE challenge if you want to better understand the complete flow!
